Class Room Requirements: If possible, screen Projector that can be connected to my laptop with wall or screen to project onto.

It would be ideal is each student could have room to keep their machine set up and also draw at their spot. If this is not possible, we could move the machines from the table to the floor as needed.

Also, I will need some tables set up in the front or center of the room for demonstration and drawing. Tables can be butted together for this.
