Supply List for EQStitch

EQStitch loaded and activated on your laptop

One to two weeks prior to class, please connect to the internet and open EQStitch. This will ensure that the program is activated and ready for class!

Sewing machine with embroidery module, embroidery foot and necessary cords and supplies.

Either a cord to connect your laptop to your embroidery machine or a USB memory stick if your machine takes one to transfer the embroidery design to your machine. Make sure this is the proper memory stick to use on your machine, with no files on the stick that are not compatible with your machine.

Fabric: 2 pieces of white fabric 12" by 18" each that are either solid or read as a solid

Stabilizer: 2 pieces 12" by 18" mid weight leave in stabilizer that does not show through your fabric. Frequently beige stabilizer hides better behind white fabric.

Embroidery thread in any color that shows up nicely on your white fabric (red, green, blue, yellow, gold orange, purple, you get the idea), as you will want to see the stitches.

Embroidery needle that matches the weight of your thread.

Basic sewing supplies (bobbins, scissors, e.t.c.)

Hoop for your embroidery machine that will stitch an embroidery design that is 5 ¼" by 3 ¾". For my machine that is a large oval embroidery hoop, with interior dimensions of 6 ½" by 10 ¾".   Remember that you need some open space between your design and the edge of the hoop as your machine cannot stitch right up to the edge of the hoop.

See you in class!!!!!!!!
